

Legend

- SFRA Study Area
- National Coastal Erosion Risk - Long Term**
- Advance the line
- Hold the line
- Managed realignment
- No active intervention

Notes

The National Coastal Erosion Risk shows the coastal baseline. This baseline is split to 'frontages'. These are defined as lengths of coast with consistent characteristics based on the cliff behaviour characteristics and the defence characteristics. It is intended as an up-to-date and reliable benchmark dataset showing erosion extents and rates for three periods: Short Term (0 – 20yr); Medium Term (20 – 50yr); and Long Term (50 – 100yr). No Active Intervention Policy Scenario and with the implementation of Shoreline Management Plan 2 Policies.

This map indicates Shoreline Management Plan policies for the long term scenario as indicated in the South Foreland to Beachy Head Shoreline Management Plan.
